

Google Gemini API Developer Guide

API Introduction The Google Gemini API grants access to Google's highly efficient Gemini model series. The family is natively multimodal and trained on text, code, audio, image, and video data.

Model Offerings - Gemini 2.5 Pro: Flagship model for high-reasoning, complex coding, and multimodal analysis. - Gemini 2.5 Flash: Light, fast, cost-efficient model optimized for low-latency streaming and high volume tasks.

Developer Capabilities The Gemini API supports Structured Outputs (forcing JSON schemas), Function Calling (declaring tools that the model can invoke), and System Instructions to steer the model's persona.
