

Model Context Protocol (MCP) Specifications

Introduction to MCP The Model Context Protocol (MCP) is an open standard designed by Anthropic. It provides a secure, unified protocol for AI models to access local or remote data sources, environments, and tools.

Core Components - **MCP Clients:** AI applications (like Claude Desktop or IDEs) that connect to MCP servers. - **MCP Servers:** Lightweight programs that expose specific capabilities, structured under:

1. **Resources:** Read-only data sources (files, DBs, logs).
2. **Tools:** Executable functions (terminal run, file edit, API fetch).
3. **Prompts:** Built-in prompt templates that help clients frame user requests.
